

# AccuRIP is a Network RIP

## Macintosh to Macintosh Sharing...

Follow these instructions when you wish to share the AccuRIP driver (built for your selected Epson model) with other users on your Network. Install on just one host computer and share it. Easy!

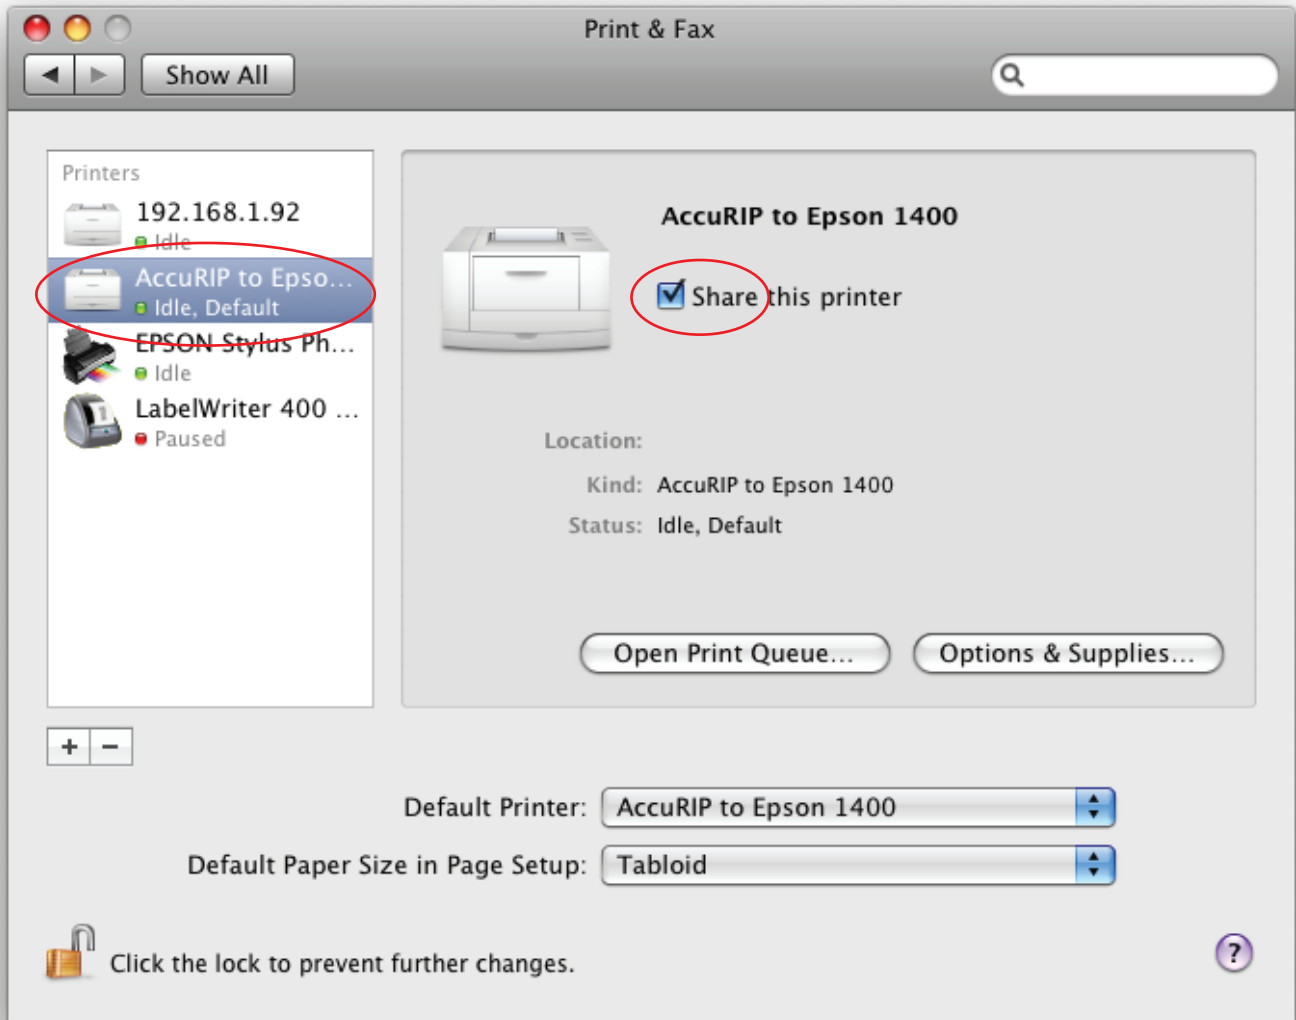

1. From the hosting Mac Computer (the one that AccuRIP is installed on) go to your SYSTEM PREFERENCES and choose PRINT & FAX.

**NOTE:** AccuRIP Software is designed to work with (1) Epson model at a time and shared with any or all users across your Local Area Network. If you wish to use AccuRIP for additional Epson models simultaneously contact Freehand or your Reseller to purchase an additional User License (another copy of AccuRIP).

Continued...

2. In the Print & Fax Window select the “AccuRIP to Epson driver” for your particular model. Also, click “Share this Printer.”

3. Now from another Mac (on your network) go to SYSTEM PREFERENCES and choose PRINT & FAX.

Click the + button to Add the AccuRIP to Epson Driver from the list of default printers. Choose the proper AccuRIP driver. In our example it is called: AccuRIP to Epson1400@Laura. “Laura” being the name of the host computer in this screen capture.
