

*Hate sending just one film separation at a time to the printer!
Spend valuable time loading individual sheets of film by hand!
Babysit your inkjet instead of doing other important tasks!*

Is this you?

Wish someone would invent something to fix the problem?

Freehand Graphics developed the efficient and affordable resolve to your costly problem...

ditto

inkjet film feeder™

*Load up to 8 sheets of film and WALK AWAY.
The ditto is the answer to films sticking together!
Now you can output an 8 color separation or several smaller jobs. At just \$189, the ditto inkjet film feeder will pay for itself in as little as 1 week!*

Life BEFORE the ditto:

For a 6 color job the user without the ditto has to load one film, go to the application's print window and manage all file output options for just that one color, send that color to print, let it spool and finish printing just to do it again 5 more times. Besides being a huge waste of valuable time, the need to repeat increases the chances of user errors.

Life AFTER the ditto:

For a 6 color job the user loads 6 films into the ditto inkjet film feeder, goes to the print window and manages the file output options ONCE, selects ALL 6 colors, hits print and WALKS AWAY! The 6 color separation is printing while they are busy with a different task!

At just 12 films a day (13" x 19") at a resolution of 1440 x 720 you save 9 hours per week (a full work day) attending to film feeding and managing color separations one at a time. Multiply that by a pay rate of \$15 per hour and you are saving \$135 per week! Plus, earn more by being more productive with those hours. Busier shops save even more!

Use your valuable time more productively!

AVAILABLE FOR THESE FINE EPSON PRODUCTS:

**Workforce 1100 • Stylus Photo 1400 (European 1440) • Stylus Photo R1800
Stylus Photo R1900 • Stylus Photo R2400 • Stylus Photo R2880**
